Before you arrive for your appointment, please review the following:

Patient Information Form

Please complete your Patient Information Form and bring it with you to your appointment.

Driver's License or other form of identification

We will want to make a copy of your driver's license for identification purposes. If you do not have a driver's license, we accept a State of Florida identification card, or for students we accept student ID cards.

Insurance Identification Cards

Please bring any insurance cards you have to your appointment. We accept traditional Medicare for medical eye exams, but no Medicare Advantage plans. We also accept Vision Service Plan (VSP) and Eyemed routine vision exams. If you have health insurance or vision insurance not listed here, be sure to bring your cards for our records.

Medications

Please bring a list of all medications, both prescribed and over-the-counter medications, that you routinely use. All medications and supplements can potentially effect your vision and the health of your eyes.

Eyeglasses

We ask that you bring with you all eyeglasses that you routinely use, even if you primarily wear contact lenses. Please bring full-time glasses, reading glasses, computer glasses, occupational glasses, and any sunwear that you use, even if not prescription.

Contact Lenses

If you currently wear contact lenses, please wear them for your appointment. We would also ask that you bring a copy of the prescription for them, or the box or packaging from the lenses, if you have it available. We also need to know what solutions you currently use to care for your lenses.

We routinely use dilating drops for our patients in order to completely assess your eye health. This means you will be light-sensitive after your appointment and will need sunglasses afterward. If you have sunglasses of your own, they will be acceptable to keep you comfortable outdoors. If you do not have sunglasses, we provide all patients with temporary sunglasses. You may want to plan to have a driver available if you have been bothered by dilation in the past or if you have never had your eyes dilated.
